1.0 Introduction

1.1 Purpose of Manual

1.2 Organization of Manual

2.0 Organization of OCS

3.0 Computer Center Facilities

3.1 Hours of Operation

3.2 Operation During Weather Emergencies

3.3 Security and Access

3.4 Tours of the Computer Center

3.5 Using the Facilities of the Computer Center

3.6 Hardware Facilities

3.7 Software Facilities

3.8 Peripheral Devices

4.0 Project Management and Control

4.1 Project Initiation Procedure

4.2 Production Procedure

4.3 Computer Center Scheduling

4.4 Production Control

4.5 Quality Control

4.6 Priority Scheduling

4.7 Reporting Deficient Products

4.8 Technical Assistance

MASSAGER-DATABANK AND PROGRAM LIBRARY. . . .

A new version of the MASSAGER-DATABANK system (a data storage and statistical manipulation package) has been placed on the batch and interactive systems. New cataloged procedures implement this version which corrects minor errors of earlier versions, and includes a simple report generator and improved nonlinear regression routines. For MASSAGER users, these changes are detailed in a new edition of the MASSAGER User's Manual, dated 1 April 1970. Moreover, Chapter V, "Deck Structure" of the April-dated User's Manual has been amended in a new version of that Chapter, dated 1 June 1970. Those interested in a copy of the new User's Manual or, if applicable, Chapter V, should contact the Systems Development Staff/OER [redacted] STAT

The Systems Development Staff also has collected about fifty documented programs. Although the Staff has tested most of the programs, they are offered without guarantees. For further information, interested parties may obtain a five-page listing (with short descriptions) of the program in the library by calling x [redacted] STAT
(Carl, [redacted]) STAT

PL/1 SORT (IHESRTA). . . .

Users of the PL/1 sort (IHESRTA) should specify that parameter 4 of the sort argument list should have attributes of fixed binary (31,0). In Version 4 of PL/1, a precision of (15,0) sufficed; however, a full word binary variable is required in Version 5 of PL/1.
(Ed, x [redacted]) STAT

IEBDG USERS (Data Set Generator Utility). . . .

To obtain a SYSOUT=A printout of your generated output, the following DCB keywords must be specified:

DSORG=PS, RECFM, LRECL, and BLKSIZE as illustrated in the following DD card:

```
//SEQOUT DD SYSOUT=A,DCB=(DSORG=PS,RECFM=FB,LRECL=80,
//          BLKSIZE=800)
```

(Joe, [redacted]) STAT

ALL HANDS. . . .

Readers of TECH NOTES are reminded that its page is the means of sharing your discoveries with others. Tips, kinks, short-cuts, and "ounce-of-prevention" warnings about equipment or programs are always appreciated. If your idea was useful to you, it probably would be to others. A phone call or informal note from you is all it takes to submit your welcomed contribution.

Phone Contributions to Gayle, [redacted] STAT
